THRESHOLD
SOLUTIONS

Discover the Excellent Systems range of products that include Components, Kits and QuickRamps.

Introduction to **Excellent Systems**

Excellent Systems create a range of products including Ramp Kits and QuickRamps. The company prioritise great products, sustainable materials and responsible production. Easiaccess are proud to be their recognised distributor in the UK.

Excellent Systems began in 1992 producing flooring, including slip-resistant flooring. In 1996, they expanded to the rehabilitation industry, producing a range of innovative products that are unique in the accessibility market.

Environment

Excellent Systems prioritises sustainable materials, responsible production, and reducing environmental impact. They strive to create products that have minimal negative effects on the environment.

Accessibility

The company is dedicated to providing accessible solutions. They offer unique and innovative products for improved access, ensuring they cater to the needs of all individuals.

Innovation

Innovation is at the forefront of Excellent Systems values. Each product they create is carefully designed and tested to solve concerns for the intended user.

Environmental Considerations

The creation of Excellent Systems is a waste-free, cradle to cradle process, as any defective products and off cuts etc, can be sent for regeneration. All products are manufactured from the environmentally friendly material Polyethylene (PE), the same material that is used on the inside of milk cartons.

Non-toxic

PVC-free

Food grade

Odourless

Rebuildable

Recyclable

Features

Non-Toxic

All products are manufactured from the environmentally friendly material Polyethylene (PE).

Flexible Temperatures

The products can handle temperatures down to -50°C and up to 100°C.

Slip Resistant

The surfaces are self-draining and with SureGrip inserted are highly slip resistant.

Durable & Strong

Excellent Systems products can bear a weight of 2000kg.

Corrosion Free

All products are acid-resistant, corrosion-free and resistant to household detergents.

Durable & Strong

Test have shown that the products are harmless under combustion with no toxic substances released.

Calculating the **Threshold**

Measuring a Threshold

1
Place the Ramp-o-meter as above, with the ruler perpendicular to the edge.

2
Hold it in place whilst you push the ruler to the ground.

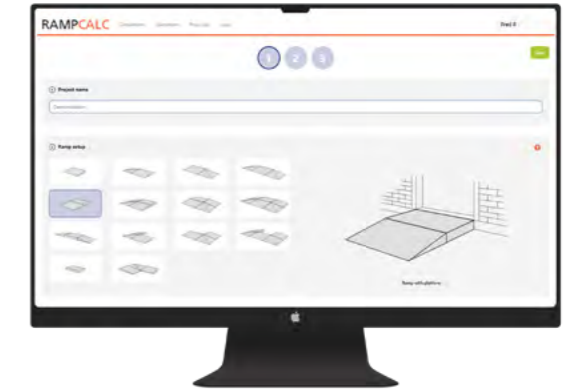

3
Read the height of the ramp which is visible in the middle of the small holes.

4
If two numbers are clearly visible, choose the lowest one.

Ramp Calc

RampCalc is used to calculate all types of Excellent Systems ramps, quickly and easily. It will generate a list of all components required together with a downloadable installation guide.

Please register your interest at info@easiaccess.co.uk.

Explore the **Surfaces**

Surfaces

Holes

The standard **surface with holes** has a slip resistant surface and is self-draining. Dirt will be collected inside the ramp, whereby it can be collected and easily cleaned.

SureGrip

The **surface with SureGrip** tiles inserted at 50% coverage is recommended mainly for outdoor use and increases the slip resistance. At 100% coverage SureGrip is well suited to all footwear, especially pointed heels.

Available in Yellow, SureGrip can also be used as a visual indication.

SureGrip = S

Infill

Infill tile

Manufactured from regenerated materials, with fixed locks on 2 sides and reduced surface area, these help to reduce the cost of building a solution when placed underneath the top surface.

N.B. There is extra room for C-Locks on all sides.

Six-Pack Infill tile

Equivalent of 6 full tiles, stacked side by side, 3 layers high. Designed to minimise materials and be quicker to install, therefore reducing the cost when building larger ramps and platforms. Placed on the lower layers.

N.B. Produced from partly new and regenerated materials, meaning the look can vary.

Hard tile

Most tiles are available in a 'Hard' version which is produced from a higher density material. These are well suited to carpeted surfaces to minimise movement and reduce unwanted 'flex'. Please speak to a member of our technical team in these instances who can better advise on the most suitable product.

Please contact us if you require this option, which may be subject to a minimum order quantity and leadtime.

Excellent Systems Ramp Tiles – SureGrip

Why choose a **Ramp Kit?**

When it comes to tackling a small threshold with simplicity and ease, then look no further than a ramp kit. Each kit includes a pre-assembled ramp, fixings and fitting instructions and can be installed in a matter of minutes.

The flexibility of Excellent Systems enables it to be used in situations and locations where other portable equipment may not be suitable. We have had customers use the ramp kits for small thresholds within their kitchen or bathrooms, removing trip hazards or making it more wheelchair friendly. The ramp is made for both indoor and outdoor use, making it perfect for garages and clearance over kerbs and driveways. Being fully modular, it is also possible to re-use and re-configure all components within a kit.

If you are unsure which kit you require, take a look at the specifications provided in this booklet or call us for advice. We also offer a full range of individual components so you can receive a completely bespoke solution.

Check it out on **YouTube**

Discover a wide variety of instructive 'How-to' guides on YouTube that showcase our invaluable resources: Excellent Systems Ramp Kits and QuickRamps.

These videos are designed to provide you with comprehensive assistance and step-by-step instructions on utilising our products effectively.

Ramp Kit Information

Ramp Kit Layers

Ramp Kits comes packaged with pre-assembled layers. Therefore, very little construction is needed to complete the ramp.

Types of Kits

There are 3 types of kits available; Ramp Kits, Corner Kits, Platform Kits. Each kit compliments each other and can be connected together to create a bespoke solution.

Corner Kit Options

The corner Kits can be placed on either side of a ramp kit to create a two-way entry.

What is in a Ramp Kit?

All Excellent System kits come pre-packaged with the layers, fittings and instructions included. Below is an example of what you will expect to find in your kit - quantities will vary depending on the kit chosen:

Easy to build

Excellent Systems ramp kits can be constructed with ease by all, regardless of experience. Simply using the components provided and a rubber mallet; follow the instructions to build the ramp effortlessly, tapping the locks into place.

18 – 55mm Ramp Kit

Why choose **QuickRamps**?

QuickRamps are delivered ready to use and can be dismantled and reassembled for new doors. This is useful if your needs change, or if you move house, for example. The Quickramps are all made with a width of 100 cm and are easy to adjust yourself.

The height of the ramps varies from 4 to 60 mm. Find the right height for your doorstep by measuring it with the Ramp-O-Metre.

On the backside of the QuickRamps there is space for 4-5 Quick Pads or Quick Tape. The mounting tape is double adhesive, for easy attachment on the floor. Mounting pads have a double adhesive surface on the underside, so they can be mounted directly on the floor. When cleaning, the ramp is lifted from the floor and the Quick Pads remain in place. After cleaning, the ramp is easily and simply placed on top of the mounting pads again.

Check it out on **YouTube**

Understanding Gradients

Excellent Systems is an award winning range of products, which all fit together and combine to form ramps, platforms, floors etc. The system is easily assembled with a range of locks and can be disassembled and rebuilt into different shapes and sizes, without specialist tools.

When it comes to ramps, we have created 4 categories which relate to key gradients that can be achieved: 1:7, 1:14, 1:20. We have marked each one with a colour; Use **BLUE** ramps with other components in the **BLUE** series, **GREEN** ramps with other components in the **GREEN** series and **ORANGE** ramps with other components in the **ORANGE** series. The guidance below provides some typical configurations.

Gradient 1:7 | 14.5%

Even rise

Recommended use: Threshold ramps when limited space is available, especially suitable when assisted.

Gradient 1:14 | 7.5%

Recommended use: Ramps with small "rest platforms" - especially suitable for hand-driven wheelchairs.

Even rise

← Using Ramp 12535-2 provides the strongest solution

Recommended use: Larger ramps when space is available - especially suitable for electric wheelchair.

Understanding Gradients

Gradient 1:20 | 5%

Recommended use: Create larger, shallower ramps when space is available - suited for all users whether assisted or not.

Full Tile

Height: 18mm
Width: 250mm
Depth: 250mm

Use:
Flooring and ramps,
build more than 2
layers high.

12503 -

Half Ramp 1 +

Height: 21mm
Width: 125mm
Depth: 125mm

Use:
Construction of
stronger ramps in
brick pattern.

12536 -

- - 2 Grey
- - 7 Black

SureGrip Tile

Height: 20mm
Width: 116mm
Depth: 116mm

Use:
In conjunction with
Full, Half or Quarter
tile to provide extra
slip resistance.

12830 -

- - 2 Grey
- - 3 Yellow

Ramp 1 Tile

Height: 18mm
Width: 250mm
Depth: 137mm

Use:
Construction of
ramps.

12505-

Corner Ramp 1+

Height: 21mm
Width: 125mm
Depth: 125mm

Use:
Construction of
corner ramps -
endings for
flooring etc.

12537 -

- - 2 Grey
- - 7 Black

Ramp 2

Height: 21mm
Width: 250mm
Depth: 250mm

Use:
Construction of
ramps with low
inclinations and
level surfaces.

12545 -

- - 2 Grey
- - 7 Black

SureGrip Ramp 2

Height: 23mm
Width: 116mm
Depth: 238mm

Use:
In conjunction with
Ramp II tiles to
provide extra
slip resistance.

12860 -

- - 2 Grey
- - 3 Yellow

Corner Ramp 2

Height: 21mm
Width: 250mm
Depth: 250mm

Use:
Construction of
corner ramps

SEAL

SixPack

Height: 54mm
Width: 500mm
Depth: 250mm

Use:

Raising ramps or flooring with more than 4 layers, where it is visible.

15000 -

■ - 2 Grey

Infill tile

Height: 18mm
Width: 250mm
Depth: 250mm

Use:

Bottom or inside of ramp, raised flooring up to 3 layers, or on top of Six-Pack infill.

12998 -

■ - 9 Slate

SixPack Infill

Height: 54mm
Width: 500mm
Depth: 250mm

Use:

Bottom or inside of ramp or raised flooring, with 3 layers or more.

15100 -

■ - 9 Slate

T-Lock

Height: 35mm
Width: 14mm
Depth: 14mm

Use:

Connects 2 layers on top of each other.

12732 -

■ - 2 Grey
■ - 7 Black

R-Lock

Height: 24mm
Width: 14mm
Depth: 14mm

Use:

Connects ramps on top of tiles. Used on the inclined surfaces.

12742 -

■ - 2 Grey
■ - 7 Black

S-Lock

Height: 51mm
Width: 14mm
Depth: 14mm

Use:

Connects 3 layers.

15250

■ Grey

L-Lock

Height: 88mm
Width: 14mm
Depth: 14mm

Use:

Connects 5 layers (SixPack and Tiles).

15200

■ Grey

Ramp Adjuster

Height: 2 - 16mm
Width: 250mm
Depth: 200mm

Use:

The Ramp Adjuster can be used to adjust the height from 2 to 16mm.

12696

■ Grey

Adjustment Key

Height: 0.5 - 3mm
Width: 250mm
Depth: 125mm

Use:

The Adjustment Key can be used to fine tune the height from 0.5 to 3mm.

12527

■ Grey

Excellent Systems Installation

Expansion Guide

Height: 9mm
Width: 80mm
Depth: 11mm

Use:

Secure flooring and ramps outdoors. 2 nail/screw per expansion guide.

12695

■ Grey

Stoppers

Height: 14mm
Dia: 9mm
Dia: 14mm

Use:

Under tiles and ramps, when there is a need for removing ramps quickly.

12500

■ Black

Mounting Pad

Pad: 35 x 1mm
Plug: 9 dia x 15mm

Use:

To fix flooring and ramps indoors on wood, marble or tile. Easy to peel tape.

FIXINGS

K-SYSTEM

K-Tube

Outer-Dia: 40mm
Inner-Dia: 24mm
Length: 2000mm

Use:

With K-Lock 1 and K-Lock 2 for kerb on ramps.

17100

■ Grey

K-Lock 1

Height: 90mm
Width: 54mm
Depth: 125mm

Use:

Connecting 1 layer of K-Tube on top of tiles/ramps. Kerb will be 50mm high.

17120

■ Black

K-Lock 2

Height: 160mm
Width: 54mm
Depth: 125mm

Use:

Connecting 2 layers of K-Tube on top of tiles/ramps. Kerb will be 100mm high.

17130

■ Black

K-Stop

Height: 18mm
Width: 250mm
Depth: 137mm

Use:

Construction of ramps.

17140

■ Black

K-Drill

Height: 18mm
Width: 250mm
Depth: 125mm

Use:

Flooring and construction of ramps.

17150

Ramp-o-metre

Excellent Systems have created the Ramp-o-metre as a helpful tool to measure a threshold to determine correct solution needed.

18100

■ Multi

Assembly **K-System**

1

Saw the tubes to the required length.

2

The tubes need to be drilled in both ends with the K-Drill to mount the K-Stops.

3

Mount the K-Drill on the drill, press the tube into the K-Drill, and drill.

4

Now the tubes are ready to have the K-Stops mounted.

5

Use a rubber mallet to fasten the K-Locks. Making sure they are at least two holes from the edge of the ramp.

6

Drill holes through the K-Locks and the K-Tubes.

7

Fasten the tubes with a screw through both the K-Lock and the K-Tubes.

Assembly **Ramp Adjuster**

With the Ramp adjuster it's possible to make fine height adjustments in 2mm increments without the need for tools.

You can simply adjust to the height you need by hand before placing it under a tile.

Assembly **C-Lock**

C-Lock connects: Horizontal connections | Tool: Rubber mallet

Secures ramps and tiles horizontally.

C-Lock is easy to mount and dismount by hand.

A rubber mallet makes connecting all tiles and ramps even easier.

Assembly R-Lock & T-Lock

R-Lock connects: 1 tile + 1 ramp | Tool: Rubber mallet

Connects ramps on top of tiles. Used on the inclined surfaces.

Ramp I - Use R-Lock on first row of the ramp as shown above.

Ramp I + - Use R-Lock on second row of the ramp as shown above.

Ramp II - Use R-Lock on second row of the ramp as shown above.

Place R-Lock with the small knob pointing upwards following the angle of the ramp.

The lock is knocked into the ramp with a rubber mallet.

T-Lock connects: 1 tile + 1 tile, 1 tile + ramp | Tool: Rubber mallet

Connects two layers of tiles on top of each other.

Example of Half tile mounted in a ramp at the left corner.

Tile mounted with outside edges used.

Tile with SureGrip mounted providing specific holes.

Make sure that all locks are placed offset in each layer.

T-Locks to be placed in the top row of all ramp tiles.

The lock is knocked into the ramp with a rubber mallet.

Assembly S-Lock & L-Lock

S-Lock connects: 1 SixPack + 2 layers of tiles, 3 layers of tiles | Tool: Rubber mallet

Connects three layers of tiles on top of each other.

Tile mounted with outside edges used.

Tile with SureGrip mounted providing specific holes to use.

Make sure that all locks are placed offset in each layer.

The lock is knocked into the ramp with a rubber mallet.

L-Lock connects: 5 tiles, 1 SixPack + 4 layers of tiles, 2 SixPacks + 1 tile | Tool: Rubber mallet

Connects five layers of tiles on top of each other.

Tile mounted in a ramp - outside edges used.

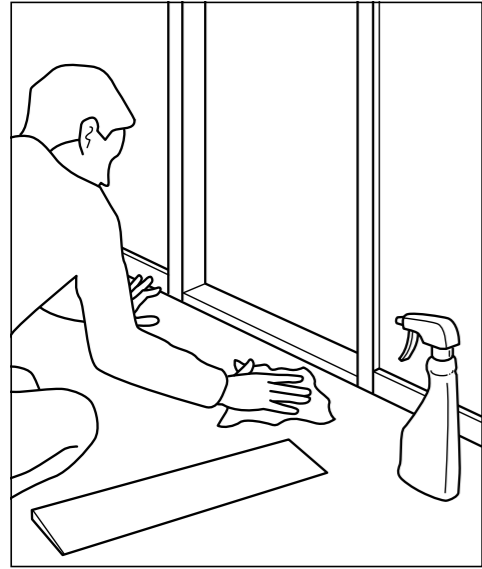

Tile with SureGrip mounted providing specific holes to use.

Make sure that all locks are placed offset in each layer.

The lock is knocked into the ramp with a rubber mallet.

Assembly QuickRamps

Wipe surface clean to remove dirt before starting.

Place QuickRamp into desired position.

Use handsaw, utility knife or jigsaw to cut length if needed.

4-8 mm ↓

For 4 - 8mm ramps, use **QuickTape**. Peel the film and apply the tape to the bottom of the ramp. Turn back over and put into desired position.

10-60 mm ↓

For 10 - 60mm ramps, use **QuickPad**. Align the ramp to the desired position. Small arrows on the ramp will indicate the placement needed for the **QuickPads**.

Assembly QuickRamps

For indoor installation, simply peel the adhesive strip and place into position.

For outdoor installation, place the **QuickPad** into position and secure with a screw.

Once the **QuickPads** have been secured, slide the ramp into position to secure the QuickRamp. Your ramp will now be ready to use.

Dismantling

If you need to remove the ramp, then unscrew (if outdoor installation was followed). Otherwise using a flat head screwdriver, lift the **QuickPad** up and it will be peel away; some pressure may need to be applied. Sometimes a residue may remain, however, simply rub the area with your finger or a damp cloth to remove.
